

VALLEY ASPHALT MEETING

5/31/00 1:00 Room 4g

David Scardino, TCA Enviro

- ^{segregated &} stockpiled waste material & soils from drum area in separate piles.
- Valley Asphalt personnel were doing the excavation
 - 4" PVC pipe was laid in the trench up to where the drums were encountered & backfilled w/ clean fill.
- V.A. will need to containerize (e.g. roll off boxes) both piles
 - David thinks there is about 4000 ft³ of solid waste material - too much to put in roll off boxes.
 - PCB in smaller pile requires handling as a PCB waste. - David will store in roll off box.
 - He plans on plugging the sewer pipe w/ bentonite at drum area & also cut from street & cap both ends.
 - There is a well ~ 50 to west of drum excavated that minimally was used for sanitary purposes. He has shut the well down. He doesn't have a well log & doesn't know how it's constructed
 - The 3 drums ^{w/ liquids} encountered need to be containerized, & characterized
 - David will document actions in a report
 - They may need to submit a 27-13 request before finishing the line; they may decide to abandon ^{only about 60' left to install} finishing the sewer & continue to use their septic system
 - They will also need a 27-13 to do exploratory boring

Should have a preliminary report to us next week.

Randy Watterworth - Valley Asphalt/S Dayton Dump & LF

Subject: Valley Asphalt/S Dayton Dump & LF

You probably know by now that ER and SI responded to Valley Asphalt last week after they trenched into drums and solid waste during a sewer installation project. Valley Asphalt retained TCA Environmental (Dave Scardino) to sample soil and liquid from the trench, a nearby well and stockpiled soil. I received analytical from the soil in the trench and some of the numbers are pretty high for VOCs and PCBs. Scardino is pretty well convinced that this property is part of the old South Dayton Dump and Landfill.

Dave Scardino is going to call me on Tuesday morning to set up a time to come in and share his findings with interested parties at SWDO. This situation is beyond the scope of Emergency Response so at this point I am willing to set up this meeting and facilitate the transfer of responsibility to the appropriate program(s).

If you would like to be a part of this meeting next week please let me know what days you are available. Right now I have Tuesday afternoon or anytime Wed or Thu. If you can't make it I will have a copy of all sample information available.

In the meantime, I will leave a copy of the soil sample results on my desk for anyone interested in taking a look.

Thanks,
Dale Farmer
